DETAILED ACTION

Election/Restrictions

- I. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, 8-10, 15-21, 24 and 25, drawn to a conversion-characteristic calculating unit determining at least one conversion characteristic adaptively with respect to an input image, classified in class 382, subclass 168.
 - II. Claims 5-7, 11-14, 22 and 23, drawn to an inverse-color converting unit mapping an image signal to from an other color space to an RGB color space, classified in class 345, subclass 604.
 - III. Claims 26-30, drawn to a chroma-converting unit converting a chroma component of an input image signal, classified in class 348, subclass 592.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination of Invention I does not require the inverse color converting unit of Invention II nor does it require the chroma-converting unit of Invention III. The subcombination has separate utility such as providing a color-conversion system which can create compatibility between non-RGB based color devices (i.e. printers) to RGB based color

devices (i.e. computer monitors) and a device which provides creation of special effects within graphical/video images utilizing chroma information.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Conclusion

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
